Stockwise-AI-WMS

Streamline operations with AI-powered inventory management. Track stock levels, detect anomalies, and optimize logistics in real-time for smarter, safer, and more efficient warehouses.

PROBLEM

Paper Record-Keeping
• Manual logs are error-prone, time-consuming, and lack real-time visibility.

Retrieval Delays
• Inefficient search processes lead to slower order fulfilment and downtime.

Stock Shrinkage
• Loss due to miscounts, misplacement, and lack of audit trail.

PROPOSED SOLUTION

Automated Tracking
• Real-time RFID, barcode scanning with automated inventory updates.

Dynamic AI Slotting
• AI optimizes item placement for fastest picking and space utilization.

Data Processing
Collects source, RFID, barcode & warehouse data in real-time.

Data Processing
Real-time RFID, barcode scanning in real-time.

AI Modeling
Predictive analytics, anomaly detection & optimization.

Dynamic Slotting
AI optimization for fastest picking and space utilization.

User Interface
Real-time dashboard for monitoring, alerts & actionable insights.

TECHNICAL FLOW

120 min
Legacy Lookup Time

<5 min
Stockwise AI Route
Streamlined retrieval improves productivity and efficiency.
